THE QUALITY OF THE TEXTILE CLEARLY HAS AN INFLUENCE ON THE CLIENT

The laundry management of an establishment guarantees the tranquility of having the laundry on time, in an impeccable condition and at a reasonable cost.

Can you imagine having to wait three months to be able to eat in one of the best restaurants, to be drooling over one of the most coveted delicacies when you suddenly notice that the table-linen is not spotless or that it is badly ironed? Or you find yourself in one of the most luxurious hotels and upon taking breakfast you notice that the tablecloth is shabby? Truly unthinkable?

It is clear that the quality and care of textiles in hotel and catering establishments is not only limited to a supporting role. Tablecloths, napkins and place settings make a fundamental contribution to the creation of the establishment's ambience and its projected image.

Guaranteeing that our establishment's table-linen is always in the best condition is in our own hands

Some hotel and catering establishments contract outside laundries to manage the laundering of their table-linen. As always, when the cost adequately meets the need and more importantly, the end product is satisfactory, the outside laundry is a good solution.

If on the other hand you are dissatisfied with the services given by your laundry or wish to reconsider the costs of this service, a good option is to install a small laundry kit in your establishment.

The use of a dryer is not required

Girbau, one of the largest manufacturers in the world of laundry equipment, advises, in respect of the washing and ironing needs, the installation of either an 8kg or 12kg washer-extractor (HS-5008 / HS-4012) and a flatwork-ironer with 220mm or 325mm diameter cylinders for small capacity hotel and catering establishments.

For the washing of table-linen it is not necessary to use a dryer. The high water extraction capacity of these washing machines, together with the evaporation capacity of the ironers allow a saving in the cost of purchasing a dryer and avoids premature wear and tear to the laundry as a result of the drying process.

As a result we guarantee an excellent standard of ironing together with careful treatment of the laundry resulting in the durability of the table-linen.

The space required to install a laundry of this type is minimal, and neither does it require a specific worker for the task. The personnel in the establishment can operate the equipment during the daily slack periods.

Obtaining the perfect ironing

When it comes to choosing a good ironing system certain parameters have to be taken into account: a good capacity for moisture evaporation, polished cylinders which don't damage the fabrics, good steam exhaust and good speed control.

The objective is to achieve perfect ironing. Girbau's ironers, in addition to the previously mentioned criteria have an exclusive kinematic strap tensioning system which guarantees a uniform and high pressure on the pressing roller and the straps over the cylinder, as well as an exceptionally smooth operation. The uniform pressure is the guarantee of good ironing.

Lastly, this manufacturer's flatwork ironers incorporate the *Autospeed* system which automatically adjusts the ironing speed to suit the type of material and humidity. Without *Autospeed*, the temperature continuously fluctuates and can cause uneven drying. By contrast, with *Autospeed* the temperature remains constant, ensuring even drying at all times for all types of fabric.

Have no doubts about the fact that: the image of your establishment is worth more than a thousand words. To care for your linen is to care for your image.
