LAUNDRY EQUIPMENT

THE FLEXIBILITY AND RELIABILITY OF ITS MACHINERY, A STAND-OUT FACTOR IN AN INDUSTRIAL LAUNDRY

Blanchisserie THD in France processes over 500 tonnes of linen for hotels and restaurants, work clothing, private individuals, etc.

From a room in a house in Bellegarde-en-Forez to 800 m² of floor space in Montrond-les-Bains - this is just one of the indicators of the progress Blanchisserie THD has made since it was set up in 2004. Located in the Loire region of France, for over ten years it has served key industry sectors like the hotel and restaurant trade, industry and groups, and offers clothing hire as added value for its clients. The laundry currently deals with 510 tonnes of linen a year.

Renewing equipment to enhance quality and energy efficiency

Over these ten years, quality and energy efficiency have always been two of the pillars of the business. Blanchisserie THD has not hesitated to add new Girbau machinery to reduce the amount of water, energy and time taken up by its processes.

HS high-speed washing machines allow high output and give the business flexibility by enabling it to adapt water levels to the actual load volume, substantially reducing consumption of water and detergents, so benefiting the company's operating account.

Actuellement,
cette blanchisserie
traite 510 tonnes
de linge par an.

Blanchisserie THD is equipped with washing machines of different capacities, with Inteli controls allowing highly professional processing of linen, giving it just the right gentle treatment and helping the user in their day-to-day work thanks to a carefully thought-out ergonomic design and technical improvements like the TILT

system for loading and unloading.

Furthermore, the drying area is equipped with

machinery of the latest design, with fast, efficient 22 and 54 kg models to provide the flexibility required by certain clients.

In the ironing area the laundry has 2 working lines. One of them has the PSP-5132 wall type ironer with the Autospeed system to stop linen and ironer belts overheating plus a chrome cylinder that significantly improves ironing quality. The other features a complete ironing system made up of a DRF-2 feeder, a PC120 flatwork ironer, two folders (FL-KING, FT-POLY), a stacker (PILVOL), an ironing board and three bagging machines.

Committed to Girbau and good service right from the start

The owners of Blanchisserie THD have opted from the start for Girbau machinery and service. The Toinon family says it is highly satisfied with the robustness and durability of the machinery, but above all with the local technical support. "We're pleased with our choice because the first machines we bought are still working flat out today," states Dominique Toinon, joint owner of the business.

The laundry's growth is clearly due to customer satisfaction. For Dominique Toinon the increase in its business is down to the professionalism and high quality of its laundry and the personal treatment and service it gives its customers.

"Regardless of whether it's a job for an individual customer or for other businesses, the commitment to professional laundry remains the same," insists Toinon.

Among Blanchisserie THD's plans for the future is the imminent purchase of an ST1302 Gas model dryer and several machines for folding and ironing towels, to provide an even faster, more efficient service.

Quality, speed, service, flexibility and versatility are the keys to the success of a laundry that lives up to its commitment as efficiently as Girbau machinery does.
